WebError

WebError class represents an unhandled exception thrown in the page. It is dispatched via the browser_context.on("weberror") event.

Sync   **Async**

```
# Log all uncaught errors to the terminal
context.on("weberror", lambda web_error: print(f"uncaught exception:
{web_error.error}"))

# Navigate to a page with an exception.
page.goto("data:text/html,<script>throw new Error('test')</script>")
```
